

BEAVERLY®: CHILLA™ 1.0 **SETUP & USAGE GUIDE**

(EA + License Generator)

This guide walks you through how to install and use your Chilla™ EA on MT5, and how to generate your personal license (_K1) key.

What You Will Receive

You'll get two files:

1. **Beaverly_License_Generator.ex5**
→ This tool helps you generate your personal license key (_K1) tied to your MT5 account and device.
2. **Chilla_AI_EA.ex5**
→ This is the actual EA (Expert Advisor) that automates trading on your MT5 platform.

1. Before You Begin

You'll need:

- A Windows PC or laptop or a dedicated windows VPS (MT5 and the license tool require Windows)
- A MetaTrader 5 (MT5) trading account
- Internet connection (even if temporarily)

- Your MT5 Account Number and Broker Server Name

💡 ***Chilla works best with regulated brokers like Deriv, etc.***

🔑 2. Generating Your License (_K1)

This process links your account to your device. Do this once unless you change devices.

🧱 Steps:

1. Open MT5.
2. Click File → Open Data Folder.
3. Go to:
MQL5 → Experts
Paste the Beaverly_License_Generator.ex5 file here.
4. Restart MT5.
5. In the Navigator panel, expand "Experts", find Beaverly_License_Generator, and drag it onto any chart.
6. Allow:
 - ☒ DLL imports
 - ☒ Automated trading
7. The tool will display:
 - ID Your MT5 Account Number
 - 🌐 Your Broker Server Name
 - 📁 Your Device ID / Hardware Fingerprint
8. Copy all 3 values and send to Beaverly Support via WhatsApp or email.
9. You'll receive a unique _K1 license key.

🧠 3. Installing the EA (Chilla™ 1.0)

Once you receive your _K1 key:

🧱 Steps:

1. Open MT5 → File → Open Data Folder → MQL5 → Experts
2. Paste Chilla_AI_EA.ex5 into the folder.
3. Restart MT5.
4. Open a 1-minute (M1) chart on your preferred instrument (e.g., Volatility Index).
5. In the Navigator, double-click Chilla_AI_EA to attach it.
6. Enable:

-  Allow DLL imports
 -  Allow algorithmic trading
7. Input your _K1 license in the input settings.
8. Click OK. The EA will now activate and start scanning for trade patterns.

Notes & Best Practices

Tip	Why It Matters
 Keep MT5 running	EA works only when MT5 is open and connected. Use a VPS for 24/7 uptime.
 One license per device	Key is tied to your MT5 account & device ID. Changing any requires new license.
 Don't rename/move files	EA and Generator must stay in correct folders.
 Reach out if confused	We can walk you through activation via live chat or remote support.

For Mac Users:

-  Use a Windows VPS (Recommended)

- Best path for full compatibility and 24/7 uptime
- Install MT5 and run the License Generator directly on the VPS
- You must keep using the same VPS or request a new license if you switch later

License Activation Rules Recap:

1. Install MT5 on the exact device or VPS where you will run Chilla.
2. Drop the License Generator on any chart.
3. Copy the code details (_K1) shown.
4. Send to Beaverly.
5. You will receive your EA license, locked to that device/VPS.
6. If you change the device or reinstall Windows/VPS, the old license becomes invalid.

Expected EA Behaviour

Chilla™ 1.0 is built with precision:

- Runs on any timeframe
- Waits for AAA opportunities; very picky
- Prevents spam trading
- Reads the market every 60 seconds
- Has Risk AI: Automatically adjusts positions according to your account balance and performance volatility.
- Automatically opens and closes trades.

What To Do If...

Problem	Solution
✗ "Invalid License"	Re-check your _K1 key and account number match.
⌚ No trades happening	Confirm MT5 is online, market is open, Chilla is notifying you of her activity and you're on a chart, preferably M1 chart.
🔄 Changed device or reinstalled	Ask for a new _K1 key — old one becomes invalid.
+ Want second account/device	Contact us for a new license (license is per user/account).

🎓 Final Words

Chilla™ 1.0 is your **personal autonomous execution pilot**.

It's not magic — but it is smart, patient, and trained for real market execution.

Let it do its job. Monitor but don't interfere. You maintain capital control — we bring automation.
